- Survey line (U.S.S. 4615)

**Physical Hazards \*\*\*\***

- Coastal erosion
- ▭ Area subject to coastal flooding

Note: The entire land area is marshy except around the airstrip.

Community Base Map—Maps are needed to show land use, ownership, location of utilities, and to plan for future village improvements. These maps can be prepared by either surveying the land on the ground or through enlargement of aerial photos or by a combination of both. Air photos can be taken at various heights. The height determines the extent of the area covered by the photograph.

The community base map was prepared from a BLM photograph taken in 1978 at a height of 8,400 feet and enlarged to a scale of 1:2,400 (1 in. = 200 ft.). This map was used to locate the present utilities, residential development, and various community services and can be used in the future to evaluate the area for village expansion and to locate new construction.

Note: This community base map has been prepared from low-altitude aerial photographs which contain unavoidable distortions in scale. Property and utility information has been generalized from many sources and may contain minor inconsistencies. This map should not be construed as a survey.
