MAP NOTES

The Governor requested and the Alaska State Legislature appropriated to the Department of Community and Regional Affairs (DCRA) funding for the community map shown hereon. DCRA contracted with R&B Consultants, Inc. in February, 1994 to design and prepare the map.

This map is based on an orthophotograph prepared from aerial photography taken in June, 1994 by AeroMap U.S. The orthophoto is an aerial photograph which has been corrected (rectified) by removing the distortions present in the original photograph; distortions can result from aircraft tilt and from changes in ground elevation.

This orthophoto was prepared using survey control data collected for the 1992 Chevak Waste Water Masterplan.

This map should not be construed as a survey. On-site surveys should be conducted prior to engineering or construction.

Property and utility information has been generated from the best available sources with limited accuracy checks. Generally the information is current as of May, 1994.

Electric and telephone systems consist of primary and secondary cables and service lines. The systems shown here are simplified for clarity.

Chevak Company Native Corporation lands are subject to the requirements of section 14(c) of the Alaska Native Claims Settlement Act (ANCSA). The Corporation is required to convey land for primary places of residence, business, subsistence campsites or reindeer husbandry headquarters that were occupied or used as of December 18, 1971, as well as land occupied by non-profit corporations. Improved community land and land necessary for community expansion, rights of way and other foreseeable community needs are to be conveyed to the city of Chevak.

FLOOD DATA
The U.S. Army Corps of Engineers (C.O.E.) has not established exact flood data for this community. This project established a benchmark on an assumed datum for reference for future flood data reference:
BM-1 - Top of ground at the northwestern corner of the Chevak Company Corporation office building, assumed datum elevation of 90.8 feet, which is approximately 65' above Mean Sea Level, based on correlation to N.G.S. triangulation station "CHEVAK".
