**Community Map** -- The profile maps illustrate land use patterns, land status, location of power lines, water resources, waste disposal sites, public facilities and other improvements. They also depict some of the natural features and hazards that affect the community. This information is very useful in planning for community improvements and expansion.

The Community Map shown here was prepared from an uncontrolled aerial photograph taken in 1983 by North Pacific Aerial Survey, Inc., that was enlarged from a scale of 1" = 1,500' to 1" = 300'. The Area Map was prepared from an uncontrolled NASA photograph provided by BLM, taken in 1979 at a scale of 1" = 10,000'.

**Flood Data**  
Area that would be inundated by a flood with a frequency of approximately 100 years.

**NOTES:**

- Flood hazard work was performed by the Alaska District Corps of Engineers at the request of and funded by the Federal Insurance Administration.
- The flood hazard area shown hereon is based on meager data, plus a minimum of historical flooding information and should be considered as preliminary.
- The major flooding that occurs at this location is the result of stream overflow and spring ice jam.
- Any levees or dikes were considered in delineating the approximate 100-year flood.
