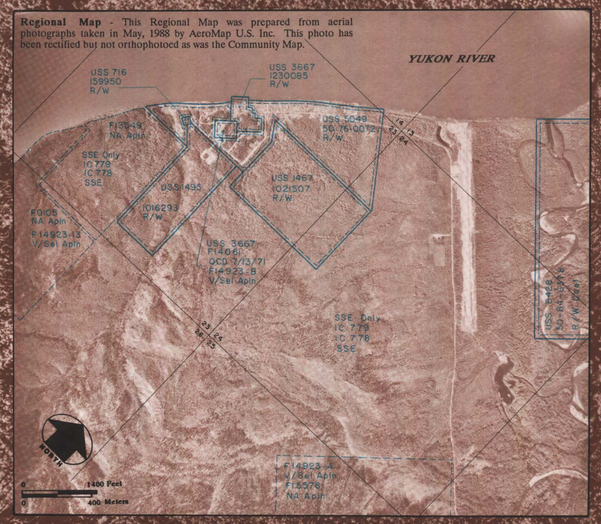
Regional Map - This Regional Map was prepared from aerial photographs taken in May, 1988 by AeroMap U.S. Inc. This photo has been rectified but not orthophotoed as was the Community Map.



Community Map - This [illegible] identifying [illegible] status, the location of [illegible] public facilities and other community improvements. It is intended to understanding of some of the natural features and hazards that community improvement and expansion.

The orthophoto map shown here was prepared from aerial photographs taken in May, 1988 by AeroMap U.S. Inc. A orthophotograph is a photograph which has been corrected (rectified) to remove the distortions that are present in the original photographs. Distortions in aerial photographs can be caused by aircraft tip or tilt, by the ground being taken, and changes in ground elevation.

The advantage of orthophotos is that they are more accurate than the original aerial photographs from which they are made. As a result, the location of structures shown on measurements obtained from orthophotos are more accurate. For example, distances measured between two points on an orthophoto will more closely approximate the actual distance between the two points.

Property and utility information shown on this map was obtained from many sources and may contain minor inconsistencies. This map should not be considered to be surveys and on-site surveys and investigations should be conducted prior to any construction.
